

Science Week 'Eggsperiment'

Year 3's 'Egg Investigation' was to drop an egg without it breaking! Children proposed methods and materials to prevent this and tried to plan for a fair test.

Children's parents arrived the next day to give a helping hand. They helped to set up the different experiments which were very inventive and daring! Methods included making a giant, elastic-band ball around the egg (in hope that it would bounce away rather than break!) and a parachute with a sponge cushion seat.

Testing took place with an eager audience and lots of 'Ooos' and 'Arrrs' as the eggs...broke! There was one

clear winner and that was wrapping the egg in layers of cotton wool. Well done for all your efforts!
