

## Science Week Eggsperiment

We had an eggstraordinary time in 2W this morning investigating materials. In groups, we considered how we could best use the material to test our egg. Once we had thought carefully about how we could use the material, we then selected the height we wanted to drop the egg from. If the material had provided suitable protection, we then thought about trying it from a different height. Lots of our eggs survived the eggsperiment and we all had an eggcellent time. Thank you too all the family members who came along too, it was cracking!
